|             |            |               |               |

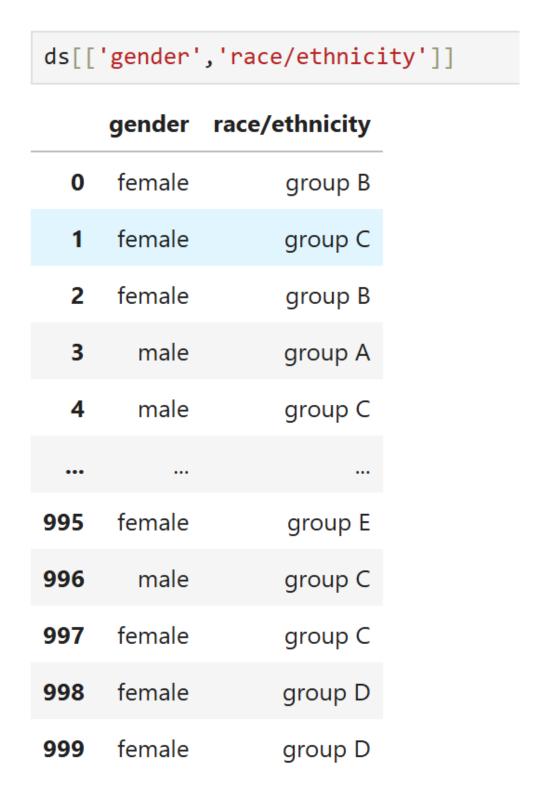

## Q.6. Select the "gender" column from the DataSet.

=> ds['gender']

```
ds['gender']
       female
0
       female
1
       female
2
         male
3
         male
4
995
       female
         male
996
       female
997
       female
998
       female
999
Name: gender, Length: 1000, dtype: object
```

### Q.7. Select the "gender" and "race/ethnicity" columns from the DataSet.

=> ds[['gender','race/ethnicity']]

1000 rows × 2 columns

## Q.8. Select the first row from the DataSet by index.

**=>** ds.iloc[0]

#### ds.iloc[0] gender female race/ethnicity group B parental level of education bachelor's degree lunch standard test preparation course none math score 72 reading score 72 writing score 74 Name: 0, dtype: object

#### Q.9. Select the row with label/index 0 from the DataSet.

## => ds.loc[0]

| ds.loc[0]  |  |
|--|--|
| gender race/ethnicity parental level of education lunch test preparation course math score reading score writing score | female<br>group B<br>bachelor's degree<br>standard<br>none<br>72<br>72<br>74 |
| Name: 0, dtype: object   |  |

## Q.10. Select rows from 1 to 5 and columns from 2 to 3

## => ds.iloc[1:5, 2:4]

| ds.iloc[ | 1:5, 2:4]              |              |
|----------|------------------------|--------------|
| parent   | tal level of education | lunch        |
| 1        | some college           | standard     |
| 2        | master's degree        | standard     |
| 3        | associate's degree     | free/reduced |
| 4        | some college           | standard     |

## Q.11. Filter the DataSet for rows where "math score" is greater than 90.

=> ds[ds['math score']>90]

| ds[d | ds[ds['math score']>90] |                |                             |              |                         |            |               |               |  |  |  |  |
|------|-------------------------|----------------|-----------------------------|--------------|-------------------------|------------|---------------|---------------|--|--|--|--|
|      | gender                  | race/ethnicity | parental level of education | lunch        | test preparation course | math score | reading score | writing score |  |  |  |  |
| 34   | male                    | group E        | some college                | standard     | none                    | 97         | 87            | 82            |  |  |  |  |
| 104  | male                    | group C        | some college                | standard     | completed               | 98         | 86            | 90            |  |  |  |  |
| 114  | female                  | group E        | bachelor's degree           | standard     | completed               | 99         | 100           | 100           |  |  |  |  |

### Q.28. Check if 'race/ethnicity' == 'group F' exists

```
=> if (ds['race/ethnicity'] == 'group F').any():
    ds.loc[ds['race/ethnicity'] == 'group F', 'lunch'] = "standard"
    print(ds.loc[ds['race/ethnicity'] == 'group F'])
    else:
        print("No row with race/ethnicity == group F found.")
```

```
if (ds['race/ethnicity'] == 'group F').any():
    ds.loc[ds['race/ethnicity'] == 'group F', 'lunch'] = "standard"
    print(ds.loc[ds['race/ethnicity'] == 'group F']) # Print updated row
else:
    print("No row with race/ethnicity == group F found.")
```

No row with race/ethnicity == group F found.
